Facts:

People with functional and physical limitations means people whose ability to move, function, orientate themselves or communicate is permanently or temporarily impaired due to a disability or illness.

The causes of the impairment can be numerous:

- Weak eyesight or blindness
- Becoming deaf, deafness, hearing loss, deaf-blindness and multiple hearing disabilities
- Impairment of functional capacity, such as musculoskeletal disorder, rheumatic disease, cerebral palsy, muscular disease, dwarfism, etc.
- Intellectual and developmental disability, often associated with multiple disabilities, physical disability, visual and hearing impairments

INCLUSIVE DESIGN

Inviting everyone to play!

We have been applying the Design for All inclusion principles in the design of our play equipment since 2000. Now we have updated our product range to better meet the needs of different users. At the same time, we have changed the name of this design concept to Inclusive Design.

New properties have been added to the product range, expanding the opportunities of use of our playground equipment for as many user groups as possible.

In public parks, it is important to take into account the versatile features and needs of the adults and children using the park – including those with functional and physical limitations. It is important that everyone is given equal opportunity to participate in play and sports.

Inclusive Design playgrounds are designed to make them such that it is easy for everyone to move and play in them, which encourages all children to play together. The aim has been to implement the Inclusive Design properties in such a manner that the play equipment is suited to as many children as possible, regardless of potential functional or physical impairments. The design takes into account that the sets feature physical challenges, functions stimulating different senses, and opportunities for everyone to develop social skills and learn something new.

In addition to the selection of playground equipment, inclusion and accessibility have to be taken into account also in the overall design of the playground. In Inclusive Design playgrounds, inclusion and accessibility are guaranteed, for example, by means of easy-to-distinguish access routes, contrasts of colour and tone, additional lighting or sound beacons, for example.

Please contact us, and our experts will help you to plan a playground that meets your particular needs!
